

The table below contains an overview of all relevant information which is currently available on the websites of the various European National Accreditation Bodies. This overview was developed by the Flemish Competent Authority as a supporting tool for aircraft operators under its administration in frame of the EU ETS. The Walloon Competent Authority cannot guarantee that the information in this table is correct, complete or up to date. In order to have final certainty on the accreditation-status of a verifier, it is recommended to ask for the relevant documents as proof. In case of further questions regarding the accreditation-status, it is advised to contact the relevant accreditation body for the verifier concerned. In addition to the norm EN/ISO 14065, verifiers under the EU ETS need to be accredited in accordance with certain additional, EU ETS-specific requirements which are included in the Regulation EU 600/2012 (the Accreditation & Verification Regulation or AVR). To ensure clarity, Accreditation Bodies are recommended to include a specific reference to this Regulation in the accreditation certificate. In case of doubts or further questions it is recommended to contact the verifier and/or the respective Accreditation Body of that verifier.

For aviation pay attention to the fact that the verifier must be accredited for this specific scope.

Last update: 16 September 2013

MEMBER STATE	National accreditation body and available information
Germany	To date, the German NAB has accredited one verifier in accordance with the norm EN/ISO 14065. It is unclear whether the verifier is accredited for the relevant activity group (12-aviation) and for the additional requirements of the AVR. This could be inquired with the German NAB
